Dear IALE members!

Another year full of scientific and societal challenges and sometimes surprises has come and gone. Some of our colleagues in countries in transition might have experienced this much more intensively and we all wish those being confronted with societal and political changes and challenges will soon have a more reliable and desirable future with regards to their careers in science.

A year full of attempts to improve policy consulting is behind us. The Intergovernmental Science-Policy Platform on BioDiversity and Ecosystem Services (IPBES) could publish its first assessment results on pollination as a vital service for supporting food security and the Conference of the Parties (Climate Action) 2016 meeting (COP22 in Marrakech) provided some hope that global collaboration on climate change will not end, even given that some elections might result in certain governments backing off their commitments to fighting climate change and challenging some of the science facts and public perceptions.

It seems for the moment that economic development and a relatively strange narrative on civil security dominates societal perceptions. Questions of sustainable use and development of natural resources are starting to get lost in the societal discourse of how to develop our future and those of upcoming generations. It is up to us to bring back in mind that no society and no global community can survive and sustainably develop without respecting, managing and conserving natural processes in an adequate way.

It is high time to communicate much more actively in public processes that singular and isolated solutions for sustainability cannot work without an integrative perspective on regional or landscape processes and their connectivity in a global context. Segregated solutions that build a wall between nature conservation and natural resource management are not helpful. They will only increase globalization effects and contribute to tendencies to “ransom” from harmful environmental impacts by paying for nature at places where there is no interest in development. Landscape Ecology as a discipline can provide valuable knowledge to show how integrative management concepts can contribute to sustainable development in a global context without excluding local actors.

2016 was a year of a growing IALE community in different parts of our world. The Chile national chapter has gotten off to a good start successfully and...
the chapters in Africa and India are close to finalizing their organizations. Still, it will be a target to sustain the work in all ongoing chapters and our call at the start of the year targeting young chapters and working groups intended to provide help for national and cross-border collaboration on landscape ecology. Please contribute with your applications to the new calls for such initiatives which is published in this Bulletin.

We are particularly proud – and here Vice-President Rob Scheller is the important driver – that new and highly active IALE Working groups could be established which support our work across the Chapters and strengthen our capacities to provide relevant scientific output. Many thanks to all those who contributed with their personal commitment to make this happen!

Furthermore, IALE started – thanks to the great initiative of our Bulletin editor and Vice-Secretary General Benjamin Burkhard – to develop its corporate identity and thus web-page, services and logo. Here we all should simply give a huge THANK YOU to this initiative!

Looking a bit into 2017, the IALE Europe Congress “From pattern and process to people and action”, taking place in Ghent (Belgium), 12-15 September 2017, will provide us with a wonderful opportunity to exchange and share our research on landscape ecology between the two world congresses (www.iale-europe.eu/iale2017). It would be great if many of us could meet there! Another conference shared with IUFRO (International Union of Forest Research Organizations) “The Green-Blue Nexus: Forests, Landscapes and Services” will take place a bit later (iufrole2017.eli-web.com/) and enable us to strengthen our networking activities across disciplines. It would be great for our members to take advantage of this opportunity.

A final little challenge of ours will consist of adapting our management structure to the increased global range and growing community of IALE. Therefore, part of the Bulletin and our next activities will be to suggest changes in our statutes and thus enable a broader international participation in the IALE Executive Committee (EC). We, the EC, are greatly looking forward to your input and support in suggesting changes in how IALE international functions.

I wish us all warmly a peaceful end of the year and an invigorated start into 2017. IALE should be a community that helps us crossing borders, interests and persuasions with the vision to develop a common world that sustainably harmonizes natural processes and societal needs.

Yours

Christine Fürst
(President IALE International)
The IALE Executive Committee suggests adapting the current statutes to ensure a better global representation and highlight the international character of our association. Furthermore, modifications of the statutes are suggested for voting, (a) following an initiative of the Danish chapter to revise the composition of the Council, (b) to support the handling of the finances of IALE international, and (c) to adapt the responsibilities in communication.

According to section N1 of our bylaws, proposed changes to the statutes can be made in writing to the Executive Committee (through the Secretary-General) by any member in Good Standing. If approved by the Executive Committee and the Council, proposed changes are published in the Bulletin or the web site to members at least two months before a scheduled vote among members in good standing on the changes. If approved by a majority of the valid ballots cast, the changes will become effective immediately.

Soon, you will obtain an invitation by email to vote on the suggested changes by YES or NO.

The following sections are suggested to be changed:

Competitive call:
Support for Chapter Conferences, Working Group activities and support for Conference trips

Dear IALE members,

we wish to invite you in contributing to IALE International’s activities through the following calls:

1. Call for Chapter Conference Supports
We consider the national and regional chapter meetings to be key for engaging the IALE community and supporting a broad perception of landscape ecology as an integrative discipline. Therefore, we ask for competitive applications for the financial support of chapter conferences that can be provided as a loan or direct support. Combinations of both are possible and subject to incoming requests and available funds. Applications for supporting chapter conferences should be send by January, 15, 2017 to Christine Fürst, christine.fuerst@geo.uni-halle.de including a one page description of the event and a financial plan that justifies the requested money.

2. Call for supporting running / new Working Groups (WGs)
We consider WGs to be the most suitable instrument to enhance the cooperation and capacity building within and between the regional chapters. WGs can address a particular thematic / disciplinary interest, specific communities (e.g. young scholars) or cross-cutting topics that enhance interdisciplinary collaboration or cooperation with other platforms or societies. New WG suggestions should include the addressed topic, a short description including planned activities and the contact of the new WG leader. Applications for financial support should provide a 1 page summary of the intended activities for which the support is required and provide a financial plan. Applications should be send by January, 15, 2017 to Robert Scheller, rmschell@pdx.edu.

3. Call for other activities
In support of communication and outreach activities and for strengthening the cooperation within the IALE community, we invite suggestions for innovative activities. These can comprise e.g. in capacity building or transfer activities, young scholars engagement in science-policy dialogues or innovative forms of stakeholder engagement in landscape ecological research (citizen science). They should primarily complement other activities such as conferences or workshops so that synergies can be used most efficiently. Applications should be addressed to Felix Kienast, felix.kienast@wsl.ch until January, 15, 2017 including a 1 page description of the planned activity and its added value / innovation input and a financial plan.

We are all greatly looking forward to your participation in our new WGs, your ideas, suggestions and particularly to sharing your landscape impressions with us!

Christine Fürst
Felix Kienast
Thomas C. Edwards

IALE 2017 European Congress
From pattern and process to people and action
Ghent, 12-15 September 2017

IALE-Europe and Ghent University are pleased to announce the call for symposia for the IALE 2017 European Congress.

The congress theme reflects that landscape ecology as a meeting point, where pattern and process meet people and action, seen as a way of thinking when dealing with European landscapes. We want to put emphasis on the integration of pattern and process as a biophysical component of landscape ecology with people and action, bringing in the social and cultural approaches. This requires a true interaction of natural and social sciences, of science, policy and practice. Therefor we see the congress as an opportunity to reflect on the state of the art of landscape ecology today. Furthermore, the challenge of the congress is what the future directions are of landscape ecology as a social relevant approach for science, policy and practice.

This congress is time to reflect because ... as IALE celebrates 35 years, the IALE 2017 European Congress is the moment to reflect about current trends and approaches in Landscape Ecology ... it is time to look forward to futures directions for landscape ecology research and practice.

More information on the Congress website: www.iale-europe.eu/iale2017

Assessment and Valuation of Recreational Ecosystem Services of Landscapes
Special Issue of the journal Ecosystem Services

Recreation is one of the numerous benefits that individuals and societies gain from landscapes and the natural environment. Various direct and indirect benefits result from recreational opportunities, including improved physical health, the regenerative qualities related to being outside and contributions to regional development. This Special Issue is focused on the assessment and valuation of the cultural ecosystem service of recreational opportunities, especially at regional and national levels. We invite contributions that present novel insights and latest methods for mapping and assessing recreational ecosystem services (RES) and cultural ecosystem services more broadly, tackling potentials, demand, actual use, as well as economic and socio-cultural values and benefits. We are particularly interested in practical applications and the potential for modelling and mapping outputs to be used in policy and practical decision making. We welcome submissions that address the following key questions:

- How can we advance the theory and practice of RES mapping, assessment, and economic and socio-cultural valuation in the context of MAES (Mapping and Assessment of Ecosystems and their Services), including suggestions for harmonizing the diversity of approaches?
- Which bottlenecks and innovative solutions have been identified in the mapping, assessment and valuation of RES?
- How can we implement RES assessments that provide valid and relevant information at various spatial and temporal scales?
- How can we harmonize different approaches to mapping and assessing RES, for example among EU member states, to enhance the comparability of the results?

Deadline for submission: May 31, 2017
Short title: Recreational ES

The full call for contributions and all submission details can be found at: www.journals.elsevier.com/ecosystem-services/call-for-papers/special-issue-on-assessment-and-valuation-of-recreational-ec

New book: Labor Forces and Landscape Management

By H. Shimizu, C. Takatori, N. Kawaguchi (Eds.)
Japanese Case Studies

- Proposes a new concept of “landscape management labor accounts”
- Presents case studies that provide a balance between theoretical development and actual evidence
- Contains contributions by authors from various academic fields including urban planning, landscape planning, agriculture, forestry, sociology, and ecology

The purpose of this book is to present a new proposal for landscape management labor accounts. Many matured countries are now confronting an aging society and a shrinking population. Land degradation in those countries is basically caused by a lack of local labor forces. It is very important, therefore, to consider and develop methods to provide appropriate labor forces for the sustainable management of landscapes or to reduce or shrink landscape management areas sustainably with available labor forces. Landscape management labor accounts provide a foundation for such development.

This book consists of four main parts. The first part is concerned with forming concepts, definitions, and overviews. Change in land management policies, research topics, and issues on landscape management are dealt with in the second part. The third part consists of case studies on landscape management labor accounts. Major landscape types chosen for case studies include urban areas, flatland farmlands, Satoyama, and coastal neighborhoods. In the last part of this section, integration methods to develop landscape management labor accounts on different scales are considered. The fourth part of the book is a detailed exposition of contemporary trials to solve issues of land management for the future in the field of urban, rural, forest, river, and coastal planning. Also discussed is the connection of ecosystem service studies and perspectives on the development of landscape management labor accounts with world landscape management research.

Landscape governance – meeting new challenges

In the environmental gateway at the annual conference of the Regional Studies Association in Dublin, 4-7 June 2017, the topic of landscape plays a leading role. There will be also a special session on “Landscape governance – meeting new challenges”.

Deadline for abstract submission and registration is Friday, 24 February 2017. Here you can find the Call for papers: www.regionalstudies.org/conferences/special-sessions/ss-dublin-2017
This year’s iale UK conference was on the topic of Landscape Characterisation. This included exploring the latest developments in characterisation, classification and assessment, including methods for engagement and participation, use of open data and spatial analysis techniques.

In the UK, Landscape characterisation started to really blossom with the publication of the National Character Area Map of England, which mapped and described 159 areas of distinctive character across the country. Soon after in 2002, the Landscape Character Assessment Guidance for England and Scotland (LCA) was published by The Countryside Agency (now called Natural England), Scottish Natural Heritage, and written by Carys Swanwick, Department of Landscape at the University of Sheffield and Land Use Consultants. Aimed at practitioners, the guidance provided a framework to inform decision-making from land managers to policy makers as well as guiding research in the UK and overseas. It became a very influential document that went on to inform national policy, design guidance, sensitivity and landscape capacity studies and much more!

“It was a real pleasure to attend this conference, not only because it was a chance to learn about current methods and applications in LCA, to meet fellow landscape ecologists, but also because many of the iconic figures that ‘made LCA’ whom I had admired during my early career days were speaking at the conference. These most notable included Carys Swanwick (mentioned above) and Steven Warnock, the inventor of Landscape Description Units (LDUs), which underpinned many subsequent character assessment at the regional scale. Less familiar to me, were some excellent speakers from Historic England talking about Historic Landscape Characterisation, which I now understand has been completed for the whole of England” says Rosie Whicheloe from Ecology Consultancy UK.

Unlike other chapters, ialeUK always has a good attendance of practitioners and this conference was no exception. LCA is probably one of the most widely known and well used landscape characterisation technique and is used to inform Environmental Impact Assessments. There was also good attendance from universities and local government from the UK and further afield who presented a range of techniques to assess ecosystem services, public perception and ecologically connectivity.

The conference venue and all excursions and activities were excellent. For the first time, the field visit was held in the middle of the 3-day event allowing those unfamiliar with LCA to hear from the experts whilst walking around the historic landscape at Whittingham Clumps in Oxfordshire. There was also an opportunity to learn about a new re-wilding project called the River of Life run by the Earth Trust on The River Thames.

“I attended a lot of events, and many tend to have the same problem, they lack diversity (aka too many people with the same background doing the same type of job), but Landscape Ecology, particularly ialeUK events, impressed me as having the right mix of different professions, perspectives and experience. If you are at a loose end in June 27-29th next year for ialeUK’s 25th Anniversary conference, I highly recommend attending – I’m sure it will be a good one!”.

by Rosie Whicheloe
(Ecology Consultancy UK)
The IALE Bulletin is distributed several times a year to the members of IALE. IALE - the International Association for Landscape Ecology was founded in 1982 to promote communication between scientists, planners and interdisciplinary scientific research.
